

Workplace First Aid Kit

In an emergency our British Standard - Workplace First Aid Kits make finding products quick and easy

The very latest BS8599-1 first aid kits are designed to be user friendly. Each product is packed in specific compartments so that the product you need is instantly visible.

To maintain this design advantage, once the contents are used, the product placement diagram in the lid shows where to put your replacement items making the kit ready for the next emergency.

We've included a burn dressing which ensures you can treat a skin burn, reduce the pain and you don't need to keep the injury under running water.

As injuries at work can be life threatening you should be able to reach a kit within 60 seconds.

If your staff are split over more than one floor you must have at least one kit per floor. First aid kits should be positioned where people see them every day so that, in the event of an emergency, people will remember where to find them.

Deciding which first aid kit you need is actually very simple

So many companies offer so much choice it can become confusing. This guidance chart makes choosing quick and easy, that way

you'll buy the kit you want based on the criteria that best suits your place of work.

We've made it simple, because it really doesn't need to be complicated

We give you less choice but give you a guarantee that with a Steroplast kit you'll be compliant and on the **right side of the law!** You can rest assured that everything we supply is tried and tested, comes complete with robust guarantees, gets delivered on time, and has been designed to meet the toughest UK standards. First aid kit compliance made nice and easy by Steroplast Healthcare.

Number of significant areas in your workplace	Degree of hazard	Number of employees	Minimum requirements
A significant area is an individual floor or building. You should be able to reach a casualty within 60 seconds of an initial call for assistance. E.g An office and a warehouse on the same site constitutes as 2 significant areas: Office = Low hazard Warehouse = High hazard Each area needs to be assessed on it's own merits.	LOW HAZARD (e.g. shops, offices and library)	Less than 25	At least 1 Small kit
		25-50	At least 1 Medium kit
		More than 50	At least 1 Large kit per 100 employees
	HIGH HAZARD (e.g. light engineering and assembly work, food processing, warehousing, dangerous machinery, construction, harmful chemicals etc)	Less than 5	At least 1 Small kit
		5-25	At least 1 Medium kit
		More than 25	At least 1 Large kit per 25 employees
